

### Introducing a truly integrated Cytogenetics Reporting solution for Anatomic Pathology laboratories

Now your lab can offer a multi-modality reporting solution that incorporates advanced genetics and biopsy tests into one report. NovoPath™, a leading AP Software Platform, now offers a module that meets the unique and specialized requirements of the cytogenetics department with unlimited setup options for karyotype and FISH analysis and cell cultures recording.

- Predefine all test and culture defaults for fast accessioning and ease of use.
- Appropriate resulting fields are enabled and disabled automatically to assist diagnosticians.
- Cell culture defaults are available so that predefinition of harvest intervals, standard media volumes and expected slide counts will cut down on data entry time.
- Filter diagnoses and result interpretations as they apply to specific tests to speed result entry time.
- Import FISH and karyotype images directly into NovoPath eliminating the need for hardcopies.
- Custom design results and images on patient reports to improve your competitive advantage.

*Why pay for licenses and support for an additional cytogenetics application when you can do it all in NovoPath™!*
